Sprays a single stream,
and rotates to any degree

Sprays in a stationary fan of
90, 180, 270, or 360 degrees

Better for large areas
and steep slopes

Ideal for tight areas
and garden beds

Less maintenance because
the nozzle passes most
large debris that is found
in water supplies

More direct coverage,
means less water time
per zone

Average spacing of
25 feet apart

Average spacing of
10 feet apart

Less effected by
wind and foot-traffic

Repair / Replacement
of heads is less expensive

Operates best around
45 PSI

Operates best around
30 PSI

Better water efficiency

More height options

Rotary Head

Spray Head
